

THE WORLD OF ESE

DISCOVER THE WORLD OF ESE

You may already know ESE World as Europe's leading manufacturer of temporary storage solutions for waste and recycling materials. But there is a lot more to know about us. We invite you to learn about our strategy and about the values we can bring to you. We are sure you will be pleasantly surprised to see how positively these can affect your business and your goals.

We are proud to introduce you to our experienced staff worldwide.

VALUES DRIVE OUR BUSINESS

Our vision is simply to become the best in what we do and to become your preferred business partner - for a sustainable and successful business for all of us. Our core values determine our strategy and policy and our corporate culture.

CUSTOMER FIRST

CREATIVITY

RESPONSIBILITY

Let us show to you how we bring them to life and what they mean for you and our business partnership.

We aim to be the reliable and creative partner you are looking for and strive to add value to everything we produce and offer.

WE ARE THERE FOR YOU

ESE World possesses the strong resources of a globally operating group. At the same time we are very close to each regional market and understand our local customers' needs.

We have offices throughout Europe. So, with specific local application know-how and local production sites, this allows us to meet your specific requirements. We manufacture close to our customers and apply an optimised supply chain strategy thus reducing transportation, CO₂ emission and delivery time.

Sales offices and agencies all over Europe and specialised export contacts worldwide ensure excellent customer support.

WE GO THE EXTRA MILE

The members of our team like to provide solutions for you. Decades of experience and up to date know-how allow us to find innovative approaches for the challenges of your market. We make sure for you that the products meet all standards and are certified according to the applying norms - specifically adapted to your region and your customers.

Customer first! No matter how difficult your requests may seem, we go the extra mile to find a solution.

WE VALUE YOUR RECYCLABLES

ESE is a market leader in solutions for the temporary storage of waste. The width of our product range is unrivalled. Mobile waste containers, public furnishing, hazardous waste systems, underground and semi underground systems, we design and manufacture all these products and more. We recognised very early the need for the strategic integration of sustainability and how our products can contribute to the circular economy. As long as 1997 we introduced environmental management systems. These systems are aimed at reducing our impact on the environment and are constantly reviewed and updated to support you in reaching your own sustainability goals.

In our line of business there are many ways to achieve sustainability which we at ESE aim to deliver with commitment and creativity.

ONE FOR ALL

Our comprehensive range of products is complemented by a full service and logistics offer. Container distribution and management, collection and exchange or introduction of identification systems - you can rely on us for a complete sustainable and efficient waste container service both small and large scale projects.

100% recycling of used containers is part of the service. It can even be organised directly on site.

DESIGN FOR THE FUTURE

At ESE 80 years expertise is combined with the creativity of a very experienced product development team. We believe that product design is the root of sustainability. Our research activities are dedicated to ensure functionality and at the same time to comply with sustainability and environmental requirements. We meet these important standards thanks to our qualified engineers and technicians at all European locations.

Product development at ESE has to follow requirements for attractive design, user-friendly ergonomics and low noise emission, top quality, optimised use of materials, assembly- and transport- optimisation, cost-efficiency and 100% recyclability.

OUR GREEN COLOUR CONCEPT

The ESE colour concept is based on a simple equation: less colour = more recycling. Dark-grey basic containers, produced from up to 100% recycled plastics, are combined with coloured lids for waste fraction identification. Our new recycling colours are also part of the concept. Three different shades allow the colouring of virtually every recycling material - no matter which original colours the material had.

COLOUR CONCEPT is a truly sustainable product concept.

SUSTAINABLE DESIGN

The new ESE CL series is a study in sustainable design. From weight and form factor to the new colour clip concept the product strictly follows a strategy for the environment. Being lightweights with extraordinary stackability CL containers are optimised for handling and transport which reduces their carbon footprint. Use of less material saves resources as well as RAL-quality manufacture ensures a long product life. Coloured clips allow flexible use of the containers and the use of up to 100% of recycled material for production.

CL containers save up to 20% CO₂ equivalents during product life time compared to conventional containers.

HIGHEST STANDARD

All ESE products are certified according to local and international standards and norms (e.g. CEN, DIN, AFNOR, ADR) and fulfil the even higher requirements of the respective quality marks MARK NF and RAL. Quality also is one of the main criteria for the definition of eco-friendly products. A high-quality product rarely needs exchange which is the best way to save resources and CO₂. And what's more: we set and establish our own standards for better safety, ergonomics, sustainability and quality.

Standards, certification or labels, we do the research for you and assume responsibility for the compliance of our products.

LESS IS MORE

Responsibility and sustainability seem to come naturally in our area of business but they face all of us with new challenges. ESE's modern production facilities have already implemented the zero waste principle. The sites operate virtually without waste - any scrap from production is directly fed back into the process so there is no waste of raw materials at all. Materials not suitable for production go into external recycling markets. From 2002 until 2013 for example we reduced the use of material for our 1100 l containers by 12%, the use of energy for their production by 40% and their carbon footprint by more than 40%.

Less space - more volume. The INGENIO underground system is an aesthetic solution for urban environments.

CERTIFIED ENERGY MANAGEMENT

All ESE production facilities have been certified according to the energy management norm ISO 14001. True to our commitment to continuous improvement the plant in Neuruppin (Germany) has now as the first of our production sites been certified according to the even higher standards of ISO 50001.

Our plants in Crissey (France) and Neuruppin work with 100% Green Energy.

NEVER STOP IMPROVING

ESE has started a LEAN process in its plant in Neuruppin (Germany) which will be extended to the whole group. The objective of this ongoing process is to identify opportunities and define new approaches to optimise all processes and reduce wastage even further. Everything is put to test and challenged - for continuous improvement.

The involvement of all employees in our LEAN process encourages personal responsibility and ensures best results.

TEAMING UP FOR BEST RESULTS

Employees from different European locations represent the ESE World. From product research to sales, from production to recycling - our employees bring expertise and great dedication to their area of work. Internal training and further qualification of our team is of high importance to us. It improves job satisfaction, motivation and enthusiasm and makes our employees highly qualified contacts for you. We aim for an attractive corporate culture in an international environment and strive to be one of the top employers to attract the best.

ESE people from all over the world stand for our ideas, our values and beliefs and our value added products and services.

CHALLENGE ESE!

Dear Reader

The virtual walk you have taken through the ESE World in this brochure has shown you many different aspects of our group.

You may have noticed that change as well as continuous improvement are core elements of our values and strategies. Change for us means being flexible and creative to answer the demands of the markets worldwide and to provide innovative products and solutions to our customers. Continuity is a key element in our stable and reliable relationships with our business partners.

We would like to show you that our expertise and creativity can support you in bringing your business forward in ways both proven and completely new. We are looking forward to seizing exciting new opportunities with you in our business together.
